There has been a lot of research on mastitis due to the disease’s incidence rate, treatment costs and lost milk production. Photo courtesy of Caitlin MacLeod

This project, which aims to improve the health of Canadian cattle through safer and more effective antibiotic use, was done in collaboration with doctors David Kelton from U of G, Ann Godkin from the Ontario Ministry of Agriculture, Food and Rural Affairs (OMAFRA) and Annette O’Connor from Iowa State University. The OMAFRA - U of G partnership grant funded the research.
